

Accurately Manage Your Inventory in Real-Time

Unleashed brings enterprise level inventory management to your business on any device, anywhere in the world.

Accurate Stock Count and Sales Margins

Get up-to-the-minute stock numbers and sales margins in Unleashed, plus instant updates to your accounting system (when integrated). With all transactions processed in real-time, you can make better business decisions.

Purchase Orders reflecting Average Landed Costs

Often there are more costs involved in acquiring stock than just the buy price. Unleashed lets you add these additional costs (such as freight and duty) for each purchase order during the receipting process.

Track Stock Across Multiple Locations

Easily keep track of stock across multiple warehouses, in multiple locations - different countries, states or cities are managed with ease. Unleashed lets you know exactly what stock you have, where.

Assembly - Bills of Material

Unleashed's handy kitting feature means that you can sell bundled products without having to pre-assemble them. Completing kitted orders enables you to track the value of stock used, giving you an accurate finished goods cost.

Buy And Sell In Multiple Currencies

Unleashed enables you to buy or sell in any currency with all transactions converted back to your base currency for accurate reporting. If you import stock, this multi-currency capability is an absolute must.

Flexible Order Fulfillment

If you don't have all the stock on-hand to fulfil a sale, Unleashed can seamlessly split the sale into multiple shipments. Get the stock that you do have out of the door to the customer, and simultaneously order the balance.

“Unleashed is cost-effective, adaptable, and evolves with your business. Real-time updates of my stock and the ability to work from anywhere make a huge difference to my business.”
